

More than just an operational cost cutting solution for LMKR employee fleet management, XGear has helped the company act transparent.

About LMKR

LMKR is a petroleum technology company with an extensive solutions portfolio that includes several advanced information analytic solutions.

LMKR is a privately held company with worldwide operations, servicing clients, which include Fortune 500 companies in over 80 countries. LMKR has a large global footprint with its own facilities, which is supplemented by a network of technology partners and distributors. LMKR clients are big players in oil industry including CAT, Schlumberger and Halliburton.

The Challenges

LMKR was looking for a smart and transparent solution for fleet management, vehicles of 40 units across 2 cities in Pakistan Islamabad/ Karachi with 1,500 km per car on average running on a day. Tracking the vehicle fuel usage and managing the maintenance effectively were two of the main challenges they were looking a solution for.

Why XGear

For the matter of fuel consumption claimed by employees of LMKR, a high tech applied company, accurate data is the right answer. XGear with the detailed data tracking proves to have high credibility to serve the need.

Track actual fuel consumption

XGear keep tracking employees' trips from Home to Work and calculate the expected fuel consumption for those trips. XGear then combines that data with the fuel card data from the petrol stations to get real insight on how much fuel is actually consumed in the car.

Based on the data collected from various vehicles approximately 45% of the fuel usage was reduced by excluding personal trips.

Accurate data conveys the high value messages to employees

The project has initiated for 4 months, gathered data of more than 250,000 km trips so far. The best benefit XGear has brought to LMKR is the improvement to a transparent management.

Managing the maintenance of the vehicles effectively was another big challenge since there was no access to quantified data. XGear has helped LMKR take informed decisions on maintenance based on actual engine data for scheduled and un-scheduled maintenance.

Messages

XGear has created a new way of managing-simplify the operation process (reduce the human labor needs and errors) and create a strong value aligned with corporate culture. We

believe that with the global scale of LMKR, XGear is a must solution.

Testimonial

“XGear has dramatically helped simplify our fleet management operations. We can now remotely monitor our drivers from anywhere and know exactly what’s happening with each of our vehicles in real-time!”
